Limitations and method

No structural integrity issue was detected at rendering time. Document collection gaps, source limitations, alternative explanations, and reviewer decisions separately.

Collection is limited to the recorded authority and purpose. Source observations are separated from analytic claims. Candidate usernames and inferred relationships are not identity proof. Artifact hashes and normalized provenance remain in the controlled case. This PDF does not embed source files and may truncate unusually long fields; use the verified JSON export and evidence bundle for complete machine-readable records.
